## DETAILED ACTION

### **Election/Restrictions**

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 43-59, in part, drawn to an isolated polypeptide having at least 80% amino acid sequence identify to SEQ ID NO:1 (PRO1031), or to a polypeptide encoded by the cDNA of ATCC209866, and a composition thereof, classified in class 530, subclass 351.
- II. Claims 43-59, in part, drawn to an isolated polypeptide having at least 80% amino acid sequence identify to SEQ ID NO:3 (PRO1122), or to a polypeptide encoded by the cDNA of ATCC203552, and a composition thereof, classified in class 530, subclass 351.

The inventions are distinct, each from the other because:

Invention I is distinct from Invention II because they are directed to physically and functionally distinct chemical entities with different SEQ ID NO and/or ATCC#. Each of SEQ ID NOs or ATCC# is a unique and separately patentable sequence, requiring a unique search of the prior art. Searching all of the sequences in a single patent application would constitute an undue search burden on the examiner and the USPTO's resources because of the non-coextensive nature of these searches.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their recognized divergent subject matters, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the

Art Unit: 1646

currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
